

THE FRANKFORD RADIO CLUB NEWSLETTER

PROFICIENCY THROUGH COMPETITION

CALENDAR

October 2003:

- 4-5 Oceania DX Test, SSB
- 4-5 California QSO Party
- 11-12 Oceania DX Test, CW
- 11-12 Pennsylvania QSO Party
- 14 FRC Main Meeting, Phila**
- 14 REXY Meeting B**
- 16 T.I.T.S. Meeting, Noon**
- 25-26 CQ WW DX Test, SSB**
- 28 REXY Meeting B**

November 2003:

- 1-2 ARRL Sweepstakes, CW
- 8-9 WAE DX Test, RTTY
- 11 FRC Main Meeting, Phila**
- 11 REXY Meeting B**
- 15-16 ARRL Sweepstakes, SSB
- 20 T.I.T.S. Meeting, Noon**
- 25 REXY Meeting B**
- 29-30 CQ WW DX Test, CW**

December 2003:

- 5-7 ARRL 160M Contest, CW
- 9 FRC Main Meeting, Phila**
- 9 REXY Meeting B**
- 13-14 ARRL 10 Meter Contest
- 18 T.I.T.S. Meeting, Noon**
- 23 REXY Meeting B**
- 27 RAC Canada Winter Test
- ?? FRC Pizza Blast**

President's Column

Well, here we are with the first big contest of the year, CQ SSB from Oct. 24 to Oct. 26th, just 4 weeks away. As I have been saying, we need all **FRC** members to be on the air supporting the club as much of the time as possible. The Club needs every point each of us can contribute!!!

We are FRC members because we are contesters. So now is the time to do what we promised when we each became a member.

I know I have been beating this point to death lately, but I just want to inspire all of us to make **FRC #1** again and that will require participation from all of us. We need to win this year and to do that we need your support as members of the best contest club there is.

I will not be at the next meeting as I will be with Alex on **V47KP** getting everything set up for this contest. One of the important things to do during the contest is work the DXpeditions. We have many club members going away for this contest, so make a list of them and try to work them on all bands.

Many of you know members that have been inactive in the contests the last several years. Please contact them and persuade them to support the club with their participation this year. If we each regain an inactive member, **FRC** could blow this contest out of the water with very little effort. Please help out and talk up this years CQ CONTESTS SSB AND CW. We can win this year if we ALL try harder. I wish all of you great scores and lets show the YCCC the we are the BEST.

Regards, Joe K3NM

CQWW DX SSB 2003 FRC DXpeditions

VP5T - K2WB, WA2VYA & N2VW will be at VP5JM's on Provo, Turks & Caicos Isl, from Oct 21-28, 2003 for the CQ WW DX SSB Contest. CW & WARC bands before and after contest. QSL VP5T to N2VW. VP5/xxx calls to CBA.

V26DX - Doug W3CF, Jay WX0B, Sharon N5CK, Irwin KD3TB, Andy KD3RF, Thomas DL2BO, and Zig KM9M will activate the Royal Antiguan Radio Club Station, V26DX M/2 low power, for the CQWW Phone Contest. Operators begin activity October 19 until November 1. QSL all V26DX QSO's via KU9C . QSL individual ops via on air instructions. Planned activity on 6m and the WARC bands before and after test.

AWARDS - Top Gun plaque will be given to the first single op station to work us on 6 bands. Top Gun T-Shirts awarded to next 9 fastest 6 band single op Q's.

V47KP - Multi/2 with Alex, W2OX and Joe, K3NM. QSL via K2SB

P40W - John W2GD Single Op. QSL via N2MM

WP2Z - N2TK, W3FV and K3NZ are running M/2. They'll be there form 10/22-29

CQWW Log Submission Guidelines.

The ideal way to enter CQWW, is by submitting your Cabrillo file directly to SSB@CQWW.COM for your phone log and CW@CQWW.COM for your CW log. The log should be named YOURCALL.LOG and you should put your call in the SUBJECT line. The robot will let you know if you provided all the proper information. Current versions of CT/NA/TR and Writelog should provide proper Cabrillo formats for submission. Be sure to include ALL the information, especially CLUB: **Frankford Radio Club**.

You can send K3WW@fast.net a copy of your Cabrillo log or AT LEAST your claimed score. Cabrillo logs are used to produce Master.DTA files, and held as back up should the sponsor have a problem.

If you prefer to use an older version of CT for contesting, that is fine. After the contest is over, save a copy in a safe place, then open a copy with the latest version (FREE from K1EA.COM). Be sure to answer all the questions to provide all the proper category and club info.

If you do NOT put **Frankford Radio Club** in the header under CLUB we will NOT get credit.

If you are having problems or have questions about submitting your log, you may send it to K3WW@fast.net and I will make sure the files are in the proper format and submit the log. If you send me a copy of a log you submitted, be sure to mention that you have successfully submitted your log.

If you do not have Email, get me your log on a disk or get me your paper log as quickly as possible after the contest. I will convert it to Cabrillo and upload for you.

Again, report all scores/operator lists, etc. to **K3WW**.

Please do not send your log to **K3WW** the day after the contest, or during the contest. Carefully review your log for typos, and completeness AFTER you rest for a day or two. If you are not too tired to look at your log, or read your Cabrillo header for completeness, at the end of the event, you didn't work hard enough in the contest!

73, Chas K3WW scorekeeper

More FRC CQWW SSB DXPeditions

TI5 - Harry/AC8G, Ron/WA8LOW, W8ILC/Ron, Brian/KA7KUZ, Kecko/TI5KD, Tony/VE3RZ, Jorge/CX6VM, Ed/K1EP, Tom/ZP5AZL, Juan/ZP5MAL, Dale/N3BNA and Dave/WT8R, will be manning the **TI5N** Contest station as a multi-multi entry in the CQWWSSB contest, 25-26 October. QSL TI5N via W3HNC.

For a day or two before and after the contest, the individual operators will be on the using TI5/own-callsign as time permits. Expect a higher level of CW and other non SSB modes on the contest bands due to the large SSB volume in the contest. Attention will also be directed to 6 meters and the WARC bands using various modes.

QSL's for the individual QSO's should go to the callbook address unless advised otherwise. IMPORTANT - do not mix the contest QSL with ones for the individual contacts.

Team Antigua will ride once again to activate V26B on the Beautiful Island Nation of Antigua and Barbuda in the 2003 running of the CQWW SSB Contest on October 24th & 25th 2003. Our plans are to enter the Multioperator/Two-transmitter category. For a complete station description, complete with Photographs and Rate charts of The Team Antigua, V26B, Superstation. Please visit our Web Page at <http://www.frc-contest.org> and click on the Dxpeditons page and then the Team Antigua, V26B Link!

Our Grid Square is FK-97 and IOTA Number is NA-100. Members of Team Antigua will also make special attempts to be active on RTTY, PSK31, 160 meters and the WARC Bands a few days both before and after the contest. There is also a possibility of some 6 meter with conditions permitting! Most likely our operators will make their presence felt on all bands starting on or about October 22th until about November 2nd.

The Members of Team Antigua and their Callsigns

V26B Sam, WT3Q QSL Via WT3Q
V26EW Ed, N2ED QSL Via N2ED
V26OC Brian, N3OC QSL Via N3OC
V26R Mike, KA2AEV QSL Via KA2AEV
V26U Bill, W2UDT QSL Via W2UDT

Returning Member

Art Hitchens - N3DXX

FRC Awards Program
Awards for Cumulative Scores
CQWW CW, SSB & ARRL DX CW & SSB

Top Gun: (highest total) Trophy & possession of Perpetual Trophy for one year.

Big Gun: (next highest) Special Plaque.

Top Ten: Plaque for each of the top 10 SO/SOA scores.

Multi-Multi: Plaque for each of the top three domestic M/M stations and their operators. M2 scores will be combined with MM scores. Same thing for DXpeditions.

Multi Single: Plaque for each of the top 3 M/S stations and their ops. Same thing for DXpeditions.

Awards for Achieving Fixed Point Goals

Million Point Award: Plaque for SO/SOA for first time achieving one million points in a contest. One time per contest.

Tri-Meg Award: Plaque for M/S station for first time achieving three million points in a contest. Award goes to the holder of the call used. One time per contest.

Penta-Meg Award: Plaque for M/M station for first time achieving five million points in a contest. Award goes to the holder of the call used. One time per contest.

DXpeditions

Million Point Award: Plaque for SO/SOA DX-pedition for first time achieving one million points in a contest. One time per contest.

Tri-Meg Award: Plaque for M/S DX-pedition for first time achieving 3 million points in a contest. Award goes to the holder of the call used. One time per contest.

Penta-Meg Award: Plaque for M/M DX-pedition for first time achieving five million points in a contest. Award goes to the holder of the call used. One time per contest.

Grand Slam Award

Certificate awarded to every **FRC** member who participates in all four of the major contests in a given season.

Packet Spotting – Friend or Foe to Contesting?

Reprinted from the May 2003 issue of CQ Magazine with the kind permission of John Dorr, K1AR.

Every once in a while, there's a subject that needs to be discussed that not everyone is going to agree upon. In fact, with some hams that includes the very subject of contesting itself. Over the past few years I've observed the rapidly growing addiction towards the use of packet spotting in contesting. For those of you who don't understand the concept (and I suspect there aren't many at this point), packet spotting is nothing more than utilizing the widespread presence of PacketCluster™ (and other products) nodes throughout the world for the purpose of communicating the frequency and callsign of a contest multiplier and/or QSO. The idea seems simple enough on the surface. Yet, it has taken on a life of its own amongst our ranks in contesting. Indeed, it has become an obsession that has truly changed the face of contest operating—unfortunately, without particularly positive results.

The original concept of packet spotting has its roots in the late 1980's when Dick Newell, AK1A, brought his PacketCluster product to market. It seemed benign enough at the time. Local DXers and contesters utilized the tool to enhance their "spotting" capabilities. If a local group was more advanced in their thinking, they may have even linked one or two of the PacketCluster nodes together into a mini-network of sort.

Clearly in today's environment, the face of packet spotting has changed. The vast majority of users enter the packet world via the Internet. Huge, worldwide networks are in place with literally hundreds of nodes networked together. At peak times, it's not uncommon to see thousands of users connected from virtually every part of the world. Frankly, one should marvel at this achievement for ham radio from a technology point of view.

Unfortunately, the concept went bad somewhere along the way. As you'll discover in my commentary this month, I believe this may be less the case in casual DXing circles (although we have our moments in that world as well). However, it is absolutely the situation we face during high profile contest operating.

Packet Pileups

Newer contesters may find it hard to believe, but there once was a day in contesting when operators simply tuned the bands and found/worked rare multipliers/QSOs all by themselves. Before the days of packet, we would sometimes utilize two-meters as the multi-op tool of choice for DX spotting. I remember the old days of operating at W2PV's multi-op station where we had assigned two-meter spotting operating positions (much like ensuring coverage on the HF bands themselves), including the use of the local radio club in Schenectady, NY, to help us along.

Unfortunately, with the ubiquitous access to packet that exists in today's contesting environment, a new dynamic has been created. Now, when an interesting or needed station is spotted, the masses swarm on that station like a pack of hungry wolves. Instant pileups are created as a result and the operating skill now becomes that of "who can get there first." Computer logging programs contribute to this behavior as they have nicely integrated the packet environment with their software so that moving to a spot is nothing more than a keystroke away.

While it's fair to say that packet has perhaps increased the availability of needed multipliers, it has also facilitated unacceptable operating methods as well. It has become so easy to QSY to these spots that everyone does it. Often, callers don't even listen before they start calling. There's so much pressure to get there first that poor operating becomes the norm. I equate this operating environment to someone jumping into their running car and flooring the gas without first deciding where they're even going. It's just important that they're moving.

To a large extent, we've created this monster. Frankly, some of the fun of contesting has left us as we move from one packet pileup to the next. It's become a rare event to find that useful multiplier first. The numbers are simply against you. It seems that contest weekends have become one of bouncing around the packet pileups that rapidly grow into dozens of callers as our contest machines lead us to water. If this is discouraging to operators of big stations, one can only imagine how the little pistol must feel over the course of a weekend. Think about it as you're trying to work that TG9 or FO5 on ten meters that decided to show up on Sunday afternoon and became subsequently spotted on packet. In some contests, this dynamic is not limited to rare multipliers. For example, in the last ARRL SSB DX Contest, I witnessed packet pileups on random JA stations, mostly due to the limited activity at the end of the contest. It was disconcerting indeed to join a pileup of 40 other stations all simply trying to log a contest QSO.

Busted Callsigns

It seems that as the use of packet spotting has increased over the years, our operating practices have declined. If you take a look at Table 1, you'll see some embarrassing evidence of this claim. Over the course of a contest weekend (and the analysis presented for

Packet Spotting – Friend or Foe to Contesting? (continued)

this column is just one example), literally hundreds of busted callsigns make their way into the packet system. Unfortunately, as I've seen first-hand from CQ WW log checking, they also make it into contest logs. Again, many of us just don't listen. We point and click on a spot, go work it and don't even bother to listen to the callsign of the station that was just worked. The result: bad QSOs make it into our logs. More important, we've just contributed to the growth of poor operating techniques.

I'm continually amazed at the number of bad calls that make it into the system. Frankly, it's nothing less than sloppy operating. This is all about taking the time to get it right, which includes one key attribute—listening. As with real life, if we spent as much time listening as we did transmitting, we'd be amazed at the increase in our operating accuracy and effectiveness.

Intimidation of Casual Operators

If you've ever operated from overseas, you have experienced packet pileups. For an experience operator, these are really not a big deal. It's all part of the game. However, it's another story if you're simply a casual operator trying to help out by giving the contest a bit of your spare time. The casual operator is not interested in large pileups. In fact, they're really not even interested in the contest itself per se. They're more interested in deciding whether they should operate their radio or go to the beach that day. As the packet wolves descend on these poor fellows, the endless calling often results in the casual operator hitting the off button on their radio. Contesting loses in this scenario.

Intimidation can even be a factor to the experienced operator. The worldwide nature of packet usage creates awareness of interesting stations that would normally not be noticed in certain geographies due to propagation. However, as that low band multiplier gets spotted after East Coast sunrise, we start calling away, creating a difficult copying environment for even the best of operators. Again, where have we benefited from this situation?

Reduction in Contest Fundamentals

I'll admit that I'm a traditionalist in most aspects of life. Believe it or not, in the early years, it took me a while to warm up to the notion of contest logging software. At the time, I was convinced that it would simply slow me down. As one who cut his contesting teeth in the late 60s and early 70s, I'm a product of the old school. I worked contest QSOs the old fashioned way—I found them by tuning the bands. Now, I'm not so rigid that I don't see the benefit that comes from packet spotting. In fact, as I type this, I have a TELNET window running in background connected to my local W1GQ packet node. However, when it comes to contesting, packet has created a serious decline in operating basics. It's as if without packet, we have become unable to work the contest by ourselves. Loss of the packet network can create a serious crisis in some operator's minds. When reading some of the soapbox comments after a contest, it seems that the subject of packet prevails over the events of the contest itself. I see it at club meetings, hamfests, local gatherings and many other places.

In many ways, packet spotting has become a dependency to us. And, for the newer contester, they have never truly learned the fine skill of tuning the bands and finding needed QSOs. The world of packet spotting is all they know. As an example, I recently read the comments of an aspiring contester on qrz.com. Strikingly, one of their remarks was to state a goal of gaining proficiency in the use of packet radio as a critical factor to their long-term success in contesting. Not once did they mention the notion of getting the basics of "operating 101" down pat.

Cheating is Inevitable

Whether we choose to admit it or not, packet spotting has created another dynamic in contesting—cheating. Over the years, I've subscribed to the concept that the vast majority of contesters are honest. And, I still do. However, as with any large group, there's always a small subset that see life differently. Fortunately, most of them eventually get caught. But, the availability of packet has become an irresistible factor for some of our ethically challenged members with the lines of single operating becoming blurred in their minds.

Perhaps of greater concern is what I would describe as the casual cheater. This is not the hard-core cheating single operator who uses packet spotting all weekend in a way to dramatically improve his score. Rather, it's the operator that chooses to pick his spots (pun intended). Over the course of a weekend, they may work 10 or 20 spotted stations as a way of adding a percentage point or two to their score. It's like the fellow that has quit smoking and only occasionally grabs one or two cigarettes when the urge hits them.

The bottom line is that cheating is cheating. And, whether you do it once in a weekend or make a career out of it, you and contesting both lose.

Out of Band Operation

I never thought that out of band operation was that much of a factor in contesting until the past year. While operating at PJ2T, I was amazed at the number of USA stations that called me outside of the band. At first, I assumed they were simply not looking at their

Packet Spotting – Friend or Foe to Contesting? (continued)

VFOs and making honest mistakes along those lines. Then it struck me—the culprit was packet spots. Again, in the “point and call” mode that has become so common, spots hit our computer screens and off we go, with little regard to whom we’re calling or what frequency they’re on. You would be amazed at the number of stations that called me from PJ2T while I operated on 21140. Little pistols and high profile multi-multi stations were all in there. It was truly an equal opportunity example of poor operating.

As an experiment during this past ARRL DX SSB contest, we spotted a legitimate DX station operating on 21190 just to see what would happen. As sure as the sunrise, US stations appeared on the frequency and worked him—again, small and large stations alike. It was a sad commentary on the negative effects of packet.

And Finally...

The reality of packet spotting is that the technology is out of the gate. Whatever your position may be on the subject, there’s probably no turning back at this point. Or is there? As an experiment last year, N2RM participated in the ARRL DX CW contest as a Multi-2 entry with one notable change in operating strategy—no packet! Not only did they do well, they won the category, beating the likes of our K1AR operation from K1EA’s station operating with the full support of the packet network. Did their multiplier totals suffer from lack of packet? No. In fact, we were virtually tied. Here’s the comparison of multipliers:

Band	K1AR	N2RM
160	47	45
80	80	80
40	94	93
20	118	115
15	123	123
10	122	117
Total	584	573

If I seem a bit passionate about the subject this month, it’s for good reason. Packet spotting, while offering perceived value to many contesters, has become a matter of serious concern. I work in technology and use it every day. Unfortunately, packet spotting is a great technology that has gotten out of hand. Of even greater concern is the fact that there doesn’t seem to be any driving force to do something about it. All of us own a piece of this challenge. Would contesting’s interests be better served if packet spotting simply went away? I spend very little time wondering what the answer to that question is anymore. What do you think?

MEETINGS

Main Meeting

The main monthly meeting of the **Frankford Radio Club** will be held on Tuesday, October 14 at 8 PM. Location is Rosenburger Hall, Room 102 at the University of the Sciences in Philadelphia.

T.I.T.S. meeting

The Trexlertown International Transmitting Society meets on Thursday, October 16 at 12:00 noon. Location to be determined. Keep an eye on the **FRC** reflector for more info. (*Ed note: please let ye olde editor know when a permanent location is selected.*)

Rexy Meeting B

The Rexy's **FRC** Meeting B meets after the main **FRC** meeting on the second Tuesday of each month, and at about 8 PM on the fourth Tuesday of each month.

FRC Contest DXpeditions

CQ WW DX CW 2003

V26K - AA3B will be active from Antigua & Barbuda starting 26 November 2003 through 30 November 2003, including the CQ WW CW contest. This will be a cw only, single op, all band, low power operation. QSL via AA3B.

WP2Z will be activated in CQWW CW again by ironmen AB2E and K3TEJ in Multi-Two (#9World Finish in 2002). Efforts will be made to exceed last year's 44 hours operating by each op in the contest. The goal is to maximize per operator score in this 100% FRC operation! QSL WP2Z via KU9C. QSL KP2/AB2E and KP2/K3TEJ via home calls. We will operate as much WARC before the contest and Low Bands after the contest as possible.

ARRL DX CW

WP2Z - Operated by **K3MD**, Single Op High Power

ARRL Announces Contest Rule Changes

The ARRL Contest Branch has announced rule changes governing ARRL-sponsored operating events. The changes become effective November 1, 2003.

In any contest that requires off-time, any claimed off-time period must be at least 30 minutes long. "Remember that listening time counts as operating time when calculating off-time," said ARRL Contest Branch Manager Dan Henderson, N1ND.

Second, the Northwest Territories (NWT) multiplier has been renamed "Northern Territories"--abbreviated NT--for contests that use ARRL and Radio Amateurs of Canada (RAC) sections as part of the exchange. "While not an official RAC section, the VE8, VY1 and VY0 (Northwest Territories, Yukon and Nunavut) are grouped together as a multiplier in the ARRL November Sweepstakes and the ARRL 160-Meter Contest," Henderson explained. "The new name and abbreviation will more accurately describe their makeup."

Henderson said use of the NWT abbreviation was inconsistent to designate a multiplier that also included Yukon and Nunavut. Awards for ARRL-sponsored contests will continue to be issued to the VE8, VY1 and VY0 together as the Northern Territories section.

Finally, in contests using geopolitical entities as multipliers--the ARRL RTTY Roundup, the ARRL International DX Contest and the ARRL 10-Meter Contest--the official abbreviation for Northwest Territories is NWT. "This change brings the multipliers for those events into a consistent form," Henderson said. ARRL encourages contest participants to update the necessary files for their logging software.

For more information, contact Henderson <n1nd@arrl.org>.

The 2003 DX Magazine "most wanted" survey under way:

The 2003 DX Magazine "most wanted" survey <http://www.dxpub.com/dx_survey2003.html> is under way. The deadline to respond is October 15. The survey helps DXpeditioners decide where to go next. DX Magazine Publisher Carl Smith, N4AA, says not all DXCC entities are listed--just the most likely ones. Respondents are asked to select entities they do not have confirmed for DXCC. There's an opportunity to comment, where respondents may list needed countries not appearing on the list. The results will be released in early 2004.-

W1AW 160-meter transmission to QSY slightly

Starting Monday, September 29, W1AW shifted its 160-meter code practice and bulletin transmission frequency from 1818 kHz to 1817.5 kHz, starting with the 4 PM EDT (2000 UTC) code practice run. The change not only brings W1AW's Top Band frequency in line with those the station uses on other bands, it also should help to eliminate possible interference from broadcast station harmonics and birdies--something that's more likely on an integer (ie, whole number) frequency. W1AW has been conducting code practice and bulletin transmissions on 1818 kHz since 1982. Prior to that, W1AW transmitted both CW and phone bulletins on 1835 kHz.

- If you are interested in any of the above, drop me an email at n2ss@n2ss.com or give me a call on my cell phone at 609-221-4899.

CURRENT OFFICIAL ARRL DXCC STATISTICS

Active Count.....	335
Deleted Count	58
Last Addition.....	VP6/D
Last Deletion.....	STØ

9M6 – EAST MALAYSIA

Look for Bob Schenck, N2OO, operating as **9M6OO** from the 9M6AAC station at Hillview Gardens Resort from October 19th to November 13th. QSL via to Bob's home QTH.
 By the way, in case you're interested in an exotic dxpedition location with

a beautifully equipped shack, take a look at the URL below:
www.qsl.net/9m6aac
 Pretty cool! Don't have to bring a thing but a change of clothes and your credit card.

BV9P – PRATAS

The DXpedition to Pratas Island by BV3BW, BV3FG, BV4FH, DL3DXX, DK7YY, JI6KVR, N2OO, OE1WHC and ZL4PO is on schedule and if all goes to plan the operators will start activity at 1000 UTC on Oct 7th and continue to 0100 UTC on Oct 16th. There will be five stations active on all bands and modes. QSL to KU9C. For the latest news you can check their web site at: www3.ocn.ne.jp/~iota/newpage64.htm

VK9X – CHRISTMAS ISLAND

VK9XYL will be the call used by VK3DYL, VK4SJ and VE7YL Oct 13th-27th. Operation will be on SSB and CW on 80 through 10 Meters. QSL via VK3DYL.
 Oct 26th to Nov 8th will find WØYG as **VK9XG** with a focus on the low bands and RTTY. QSL direct.

XU – CAMBODIA

Oct 19th-28th will find ES1FB signing as **XU7ACE** from Sianoukville. While there he will make an IOTA side trip October 21st-23rd to sign portable from Koh Poah Is, AS-133. He will be handling the QSL's himself.

ZK2 – NIUE

JA2ZL will be signing as **ZK2ZY** from Oct 18th-24th on 75 through 12 Meters SSB. QSL via JARL or direct.

Still looking for that undisputed
KING OF WARC

Rules for FRC Honor Roll Listings.
Provide me with your total IOTAs worked, or countries (including deleted) worked for: WARC Bands, 160 Meters, Digital modes, Mobile, 6 Meters or your total for 80,40,20, 15 and 10 for 1.5K Club. Countries do not count until HQ Awards Committee takes action and announces a start date for a new country.
